

# Problem Analysis

---

## 1: Describe problem

---

---

## 2: Frequency/Intensity

---

---

## 3: Brief history of the problem

---

---

## 4: Antecedents

(When and where does the problem occur? What circumstances immediately precede the problem? What is the usual sequence of events leading up to the occurrence of the problem?)

---

---

## 5: Consequences

(What happens immediately following the occurrence of the problem? What is more likely to occur? What is least likely to occur?)

---

---

## 6: Modifying Factors

(What makes the problem better? What makes the problem worse?)

---

---

## 7: Current problem solving strategies

(What does the person currently do to try to solve problem? Do the strategies make the problem better or worse in the short term/in the long term?)
